Product Overview

Professional Wire Routing Solution

This fish tape is an essential tool for electricians designed to route new wiring through walls and electrical conduits efficiently. Constructed from a narrow band of spring steel, it offers the flexibility needed to navigate through confined spaces, around corners, and over obstacles. The design includes a durable housing case with an integrated handle, ensuring smooth winding and unwinding during installation tasks.

Technical Specifications

Key Features

- Flexible spring steel band
- Durable protective case
- Ergonomic winding handle
- Navigation around corners and obstacles

Material	Spring Steel
Housing Material	Durable Plastic
Primary Application	Wall Cavities, Electrical Conduit, Wire Installation
