

Electro-Hydraulic Rebar Bending Machine

This electro-hydraulic machine efficiently bends steel rebar. It is designed with adjustable settings to accommodate various rebar sizes and project specifications.

Product Overview

Professional Electro-Hydraulic Rebar Bending

The RB-32 is a high-performance electro-hydraulic bending machine engineered for precision and efficiency in construction and fabrication environments. Designed to handle rebar ranging from 6mm to 32mm, this robust tool significantly reduces manual labor and improves productivity on-site. It features a durable construction and is fully certified to meet safety and environmental standards, making it a reliable asset for demanding industrial projects.

Technical Specifications

Power & Performance

3000 W

Wattage

220 V

Voltage

Bending Capacity

- Max rebar diameter: 32mm
- Min rebar diameter: 6mm

Dimensions & Weight

Weight Details

Weight Type	Value
Machine Weight (kg)	175
Gross Weight (kg)	203

Machine Dimensions

600 x 580 x 470 mm

Logistics & Packaging

Packaging Details

1 unit per metal box; Carton size: 650 x 650 x 730 mm

Compliance & Standards

Certifications

CE, ROHS
