

# Electro-Hydraulic Steel Bar Bender

This electro-hydraulic steel bar bender is a powerful and efficient tool for bending steel bars. It utilizes a hydraulic system to provide the necessary force for bending steel with precision and ease.

## Overview

### Professional Electro-Hydraulic Bending Solution

The RB-16 is a high-performance electro-hydraulic steel bending machine designed for precision and efficiency in construction and metalworking environments. It features a robust hydraulic system capable of handling steel bars with diameters ranging from 4mm to 16mm. Its compact design ensures portability, allowing for seamless operation both on-site and in professional workshop settings.

## Technical Specifications

### Performance Metrics

<b>800 W</b> Maximum Wattage	<b>5 S</b> Bending Speed	<b>90 deg</b> Max Bend Angle
---------------------------------	-----------------------------	---------------------------------

Supported Rebar Diameter: 4mm - 16mm

Voltage Compatibility: 110V, 220V

## Dimensions and Weight

### Size and Weight Specs

Metric	Value
Machine Weight	15 KG
Gross Weight	16.5 KG
Machine Size	600x170x200mm
Carton Size	670x250x245mm
