

Electrodeless Lamp Power Supply

This is a power supply unit designed for electrodeless lamps. It features a metal enclosure and supports 12V and 24V power options.

Overview

High-Performance Electrodeless Lamp Power Supply

This high-frequency power supply unit is engineered specifically for reliable operation with electrodeless lighting systems. Featuring a robust metal enclosure, it provides excellent durability and superior heat dissipation for demanding environments. The unit is optimized for efficient power conversion, ensuring stable performance for your lighting applications.

Technical Specifications

Rated Power

24 W

Power Output

Model Identifier	IKY-W
Input Voltage Options	12V, 24V

Design & Construction

Key Features

- High-frequency operation
- Efficient power conversion
- Enhanced heat dissipation design

Enclosure Material	Metal
