

Electromagnetic Induction Sealing Machine

This portable electromagnetic induction sealing machine is designed for sealing various containers. It features adjustable power levels and a digital display for monitoring sealing parameters.

Product Overview

Professional Induction Sealing

This portable electromagnetic induction sealing machine is engineered for efficiency in small to medium-scale production environments. It features a compact, user-friendly design that allows for easy operation and storage. With adjustable power levels and a clear digital display, operators can precisely monitor sealing parameters to ensure consistent, reliable results across various container types.

Technical Specifications

Model Number	JDPT-5000
Key Features	Portable, Digital Display, Adjustable Power, Compact Design

Usage & Application

Production Scale	Small-scale • Medium-scale
Primary Function	Electromagnetic induction sealing for containers
