

Electromechanical Timer with Transparent Housing

This electromechanical timer features a transparent housing, revealing its internal gears and components. It is used in applications requiring timed operations and features timing control or adjustment capabilities.

Product Overview

Professional Electromechanical Timer

This electromechanical timer is housed in a high-visibility transparent casing, allowing for easy internal component inspection and maintenance. It is designed to provide reliable timing control for industrial and electrical applications. With a robust 4W power rating, this unit ensures consistent performance in timed operational sequences.

Electrical Specifications

Rated Voltage	AC 220-240V
Frequency	50/60Hz
Power Consumption	4 W

Construction & Design

Housing

Transparent Housing

Key Features

- Visible internal gears
- Adjustable timing shaft
- Pre-wired electrical connections
