

Electronic Component Connector Block

This electronic component is a connector block. It is made of a metallic or plastic material and features a cylindrical hole on top.

Product Overview

Professional Electronic Connector Block

This electronic component connector block is designed for secure integration into electronics or computer peripheral assemblies. Featuring a high-precision cylindrical top aperture, the component provides robust mounting or connection capabilities. Its versatile design ensures reliability in professional-grade industrial applications.

Physical Properties

Form Factor	Rectangular block
Connection Point	Cylindrical hole

Certification

Industry Standards	Electronics, Computer Hardware, Industrial Component
