

Electronic Component Reels

Electronic component reels are used in automated assembly processes. The reels hold and present components in a consistent and easily accessible format for pick-and-place machines.

Product Overview

Industrial Tape-and-Reel Packaging

These electronic component reels are designed specifically for high-efficiency, automated electronics manufacturing. Featuring a transparent reel design, they allow for quick visual verification of inventory and component integrity during the assembly process. This industry-standard tape-and-reel packaging ensures seamless integration with automated pick-and-place machines for high-speed surface-mount assembly.

Technical Details

Packaging Format	Tape-and-Reel, Surface-Mount, Automated Assembly
Component Color	Light Tan/Beige
Construction	Transparent polymer reel

Usage Information

Recommended Usage

- Automated pick-and-place machinery
- High-volume circuit board assembly
- Surface-mount device (SMD) storage
