

Electronic Component with Protruding Connector

This electronic component features a rectangular base with a protruding element on top. It is primarily gold or yellow, with a dark circular feature on the protruding element.

Product Overview

Professional Electronic Interface Solution

This specialized electronic component is designed for seamless integration within computer monitor assemblies and related peripheral systems. Featuring a distinctive rectangular base and a highly engineered protruding connector interface, it facilitates reliable connectivity in compact electronic environments. Its design ensures robust performance, making it a suitable choice for high-precision technical applications.

Technical Details

Component Features

- Rectangular base profile
- Integrated protruding connector element
- Centralized dark circular interface feature

Connector Type	Protruding Interface Module
Surface Finish	Gold-tone Metallic

Application Compatibility

Suitable Applications	Computer Monitors, Peripheral Systems, Electronic Assembly
