

Electronic Control Unit with LCD and Keypad

This electronic control unit features multiple LCD displays and a keypad interface. It is designed for industrial control applications requiring precise monitoring and adjustment.

Product Overview

Industrial Electronic Control Unit

This electronic control unit is engineered for demanding industrial control applications requiring precise monitoring and adjustment capabilities. The system features a robust metal chassis for secure mounting and includes an integrated LCD display for visual feedback alongside a keypad interface for direct user input. With its multi-layered PCB design and terminal block connectivity, this unit provides a reliable solution for complex control tasks.

Technical Specifications

User Interface

- LCD Display
- Keypad Input Interface

Keypad Layout

Numeric 0-9, Plus (+), P, G, PD

Construction

Chassis Material

Robust Metal

Mounting

Yes

External Connections

Terminal Blocks

PCB Architecture

Multi-layered
