

# Electronic Controller

This electronic controller series is designed for export applications. It features multiple display outputs, a keypad interface, and power control circuitry.

## Overview

### LT-C Series Electronic Controller

The LT-C series is a robust electronic controller engineered specifically for export applications. It features advanced microcontroller-based logic, integrated voltage regulation, and reliable relay switching capabilities. Designed for industrial automation and process control, it provides precise monitoring and control through its intuitive keypad interface and multiple display outputs.

## Technical Features

### Core Functionality

- Voltage Regulation
- Relay Switching
- Process Monitoring

### Control Logic

Microcontroller-based

### Interface & Display

Keypad Interface, Multiple Display Outputs

## Applications

### Suitable Industries

Industrial Automation • Process Control Systems
