

Electronic Pressure Control for Pumps

This electronic pressure control device is designed for automated pump control. It features adjustable pressure settings, dry-run protection, and an automatic restart function.

Overview

Automated Pump Management

The Electronic Pressure Control device is engineered for seamless, automated management of water pump systems. It offers essential features such as adjustable pressure settings, reliable dry-run protection, and an automatic restart function to ensure continuous operation. Designed for versatility, this unit is ideal for domestic water supply, irrigation systems, and various industrial applications requiring stable pressure.

Technical Specifications

Model	DSK-22
Certifications	CE

Key Features

Operational Capabilities

- Adjustable pressure settings
- Dry-run protection
- Automatic restart function
- Integrated pressure gauge

System Indicators

POWER • ON • FAILURE

Applications

Suitable Applications

- Domestic water systems
- Irrigation
- Industrial applications
