

Electronic Rectifier Modules

Electronic modules designed for rectification purposes. Available in MDS and MDQ series, these modules are rectangular with multiple terminals.

Overview

High-Efficiency Rectifier Modules

These electronic rectifier modules are designed for robust power conversion applications. Featuring both MDS and MDQ series configurations, these components provide reliable rectification in various industrial power systems. Their compact, rectangular design with multiple terminals ensures ease of integration into existing electrical assemblies.

Technical Specifications

Available Series	MDS Series, MDQ Series
Component Category	Rectifier Bridge Modules
Form Factor	Rectangular Module
Connection Interface	Multi-terminal block
