

Electronic Water Pressure Controller

This electronic device automatically controls and maintains water pressure. It features electronic monitoring and regulation to ensure consistent pressure output.

Product Overview

Electronic Pressure Control DSK-2.1

The Electronic Pressure Control DSK-2.1 is engineered to automatically monitor and regulate water pressure for consistent output. Designed for reliability in demanding environments, this unit features a built-in pressure gauge for real-time visual monitoring and adjustable settings to meet specific system requirements. It is an ideal solution for water pumps, irrigation systems, and various pressure-sensitive applications.

Technical Specifications

Model Number	DSK-2.1
Key Features	Electronic Monitoring, Adjustable Pressure, Integrated Pressure Gauge, Automatic Control

Application

Suitable Applications

- Water Pump Systems
- Irrigation Systems
- Pressure-sensitive Industrial Applications

Performance
