

Electronic Water Pump Pressure Controller

This electronic device automatically controls water pump operations based on detected pressure. It integrates water shortage protection, automatic restart functionality, and real-time pressure monitoring.

Overview

Intelligent Pump Control

This electronic pressure control device is engineered for automatic water pump management, ensuring reliable operation and system protection. It actively monitors water pressure to start or stop the pump as needed, providing seamless water supply integration. Built with durable components, it includes essential safety features like dry-running protection and automatic restart functionality to maintain system integrity.

Technical Features

Core Functions	Water shortage protection, Automatic restart, Pressure monitoring, Auto start/stop
Interface	Electronic display for pressure readings and status indication

Construction

Construction Material	Durable plastic components
-----------------------	----------------------------

Application

Suitable Applications

- Water supply systems
- Pump protection
- Pressure management
