

Elevator and Funicular Car for Vertical Transportation Systems

This elevator car is designed for use in elevator and funicular systems. It features a robust enclosure with ventilation slots, a secure locking mechanism, and a durable construction suitable for demanding environments.

Overview

Robust Vertical Transportation Solution

This elevator and funicular car is engineered for demanding vertical transportation environments, prioritizing safety and operational reliability. It features a heavy-duty enclosure equipped with integrated ventilation slots and a secure locking mechanism to ensure passenger protection. Designed for durability, this unit provides a dependable solution for both elevator and funicular system applications.

Technical Specifications

Model Identifier	DT-01
Compatible Systems	Elevator Systems, Funicular Systems

Features

Safety & Operational Features

- Robust enclosure construction
- Integrated ventilation slots
- Secure locking mechanism
- Designed for heavy-duty environments
