

Elevator Cable

This elevator cable is suitable for use in vertical lifting systems. The woven material provides strength and flexibility.

Product Overview

High-Performance Elevator Lifting Component

This elevator cable is engineered for demanding lifting applications, offering a robust solution for construction machinery such as cranes. Constructed from high-strength woven fabric and composite materials, it provides the ideal balance of durability and flexibility. This component is designed to meet the rigorous safety and performance standards required for vertical transport and heavy-duty lifting environments.

Technical Specifications

Product Condition

New • Unused

Key Design Features

- High tensile strength composite structure
- Engineered for flexibility in vertical movement
- Coiled configuration for easy storage and deployment
- Wear-resistant material composition

Material Type

Woven fabric and composite material

Primary Applications

Elevator Systems, Construction Cranes, Heavy-Duty Lifting, Industrial Machinery
