

Elevator Traction Motor

High-performance electric motor designed for elevator applications. This motor features a robust construction for reliable operation and long service life.

Overview

High-Performance Elevator Traction Motor

This high-performance electric motor is specifically engineered for diverse elevator applications, including passenger, freight, and service elevators. Designed for reliability and longevity, it ensures smooth and efficient power delivery for safe, comfortable vertical transportation. The unit features a robust construction and is optimized for easy installation and maintenance, making it an ideal choice for both original equipment manufacturers and maintenance providers.

Technical Details

Maintenance Features

- Accessible terminals
- Durable components
- Easy installation design

Suitable Applications

Passenger Elevators, Freight Elevators, Service Elevators

Compliance

Safety & Performance

Industry Standard Compliant
