

Embedded PC Camera Module

Compact camera modules designed for integration into laptops or embedded systems. These modules are suitable for video capture and streaming applications.

Overview

High-Performance Embedded Vision

This embedded PC camera module is engineered for seamless integration into laptops, tablets, and specialized embedded systems. Designed for reliability and high-fidelity video capture, the module supports various resolutions and form factors to meet diverse application requirements. Its compact architecture ensures easy installation in space-constrained environments, making it an ideal solution for modern video streaming and imaging hardware.

Technical Specifications

Design

Compact • Low-Profile • Modular

Sensor Technology

CMOS

Primary Applications

Laptop Integration, Embedded Systems, Video Conferencing, Streaming Devices

Performance Metrics

Performance Highlights

1080 p

Max Resolution

30 fps
