

Embroidery Machine Controller

This computer operator box is designed for controlling embroidery machines. It features multiple buttons and a display screen for adjusting speed, position, and function keys for specific operations.

Product Overview

Precision Embroidery Control

This advanced embroidery machine controller is designed for precise management of complex embroidery processes. It features an intuitive operator interface that allows for seamless control over stitch counts, spindle speeds, and color sequences. Built for efficiency, this unit enables operators to easily switch between work and repeat modes, ensuring consistent output for industrial embroidery tasks.

Technical Features

Key Control Functions

- Work mode selection
- Repeat mode configuration
- Stitch count monitoring
- Spindle speed adjustment
- Color sequence management
- Speed and position control

Interface Capabilities

Digital Display, Function Keys, Speed Adjustment, Position Control, Automatic Mode
