

Emergency and Security Lighting Unit

Emergency lighting unit designed for illumination during power outages or emergencies. It features a translucent protective cover, durable housing, manual switch, and compact design for easy installation.

Product Overview

Professional Emergency Lighting Solution

The TK-203 emergency and security lighting unit provides reliable illumination during power outages and critical situations. It is engineered with dual fluorescent tubes and a robust sealed lead-acid battery, ensuring automatic activation when needed. Its versatile design supports both portable use with an integrated handle and permanent wall mounting for safety compliance.
