

Emergency Power Supply for Lighting and Power Circuits

This emergency power supply provides reliable backup power for lighting and power circuits. It ensures continuous operation during power outages, maintaining essential services.

Product Overview

Reliable Emergency Power Solutions

The SR-YJS series Emergency Power Supply is engineered to deliver dependable backup power for both lighting and critical power circuits. Designed for seamless integration, it features automatic switchover capabilities and advanced battery management systems to ensure essential services remain operational during power outages. This unit serves as a vital component for maintaining safety and continuity in commercial buildings, industrial facilities, and infrastructure projects.

Technical Features

Operational Capabilities

- Automatic power switchover
- Advanced battery management system
- Comprehensive system monitoring
- Continuous operation support

Target Applications

Critical Infrastructure, Commercial Buildings, Industrial Facilities

System Compatibility

Circuit Types

Lighting Circuits • Power Circuits
