

Emergency Vehicle LED Lightbar

This LED lightbar provides high-intensity lighting for emergency vehicles. It features a durable PC lens and multiple flash patterns for customized signaling.

Overview

High-Intensity Emergency Lighting

The LTF8855B LED lightbar is a high-intensity lighting solution specifically engineered for emergency vehicles. Its dual-color blue and red LED configuration ensures optimal visibility during critical operations. Designed for durability and performance, this lightbar features an aerodynamic profile that effectively minimizes wind resistance and noise while maintaining structural integrity in harsh environments.

Technical Specifications

Key Features

- Multiple flash patterns
- Aerodynamic design
- Durable construction
- Includes mounting hardware
