

EN877 Standard Iron Pipe

These cast iron pipes are coated in a red protective layer and capped with yellow end caps. Meeting the EN877 standard, they are suitable for drainage systems and various industrial applications.

Product Overview

EN877 Standard Iron Pipe

These cast iron pipes are manufactured to meet the EN877 standard, ensuring high durability and robust performance in demanding environments. Designed specifically for drainage systems and various industrial applications, they feature a protective red coating that provides excellent corrosion resistance. The pipes are engineered for reliability, offering uniform dimensions and structural integrity for critical infrastructure projects.

Technical Specifications

Protective Features

Corrosion Resistant • Protective Coating

Standard Compliance

EN877

Primary Applications

Drainage Systems, Industrial Piping

Logistics and Handling

Packaging and Transport

- Stacked configuration for efficient storage
- Secured with metal frames for safe transport
- Yellow end caps for protection
