

Enclosed Lifeboat for Marine Vessels

This enclosed lifeboat system is designed for rapid deployment and safe evacuation from marine vessels. It features a fully enclosed, fire-resistant capsule, self-contained breathing apparatus, and integrated launch and recovery mechanism with a capacity for 30 persons.

Overview

Enclosed Lifeboat System

This enclosed lifeboat system is engineered for rapid deployment and safe evacuation from marine vessels in emergency situations. The capsule design is fully enclosed and fire-resistant, ensuring maximum protection for personnel. It includes essential safety features such as a self-contained breathing apparatus and an integrated launch and recovery mechanism.

Technical Specifications

Capacity	30 persons
Construction Features	Fully Enclosed, Fire-Resistant, Self-Contained Breathing Apparatus, Integrated Launch and Recovery
Application	Marine Vessel Evacuation
