

Energy Efficient LED Tube Light

High-efficiency LED tube lights are designed for a variety of lighting applications. These tubes provide energy-saving illumination and a long lifespan, making them suitable replacements for traditional fluorescent tubes.

Product Overview

High-Efficiency LED Illumination

These energy-efficient LED tube lights are engineered to provide superior, long-lasting illumination for a variety of professional and commercial environments. Designed as a direct replacement for traditional fluorescent lighting, they combine durable aluminum and polycarbonate construction with advanced LED technology. With multiple power and color temperature options available, these tubes offer versatile lighting solutions that significantly reduce energy consumption.

Technical Specifications

Available Wattage

- 9W
- 14W
- 18W
- 24W

Input Voltage AC170-265V

Socket Type G13

Performance

Luminous Efficacy

90 Lm/w

Lumens per Watt

Rated Lifespan 25000 h

Power Factor >0.5

Ingress Protection IP>20

Design & Materials

Color Temperatures

3000K • 4000K • 6500K

Materials Aluminum, Polycarbonate
