

Energy Recovery Ventilator for Commercial Use

This energy recovery ventilator improves indoor air quality while reducing energy consumption in commercial spaces. It pre-conditions fresh air using exhaust air temperature and humidity, lessening the load on HVAC systems.

Product Overview

Commercial Energy Recovery Ventilator

This commercial energy recovery ventilator (ERV) is engineered to enhance indoor air quality while significantly reducing energy consumption in commercial environments. By pre-conditioning incoming fresh air using the thermal energy and humidity of exhaust air, it effectively minimizes the load on primary HVAC systems. Its compact, robust design ensures reliable, long-term performance across diverse applications such as offices, schools, and retail spaces.

Status

NEW

Technical Specifications

Installation & Maintenance

- Compact design for easy installation
- Simplified maintenance access
- Robust construction for long service life

Suitable Applications

Offices, Schools, Retail Spaces
