

Engine Accessory Mounting Bracket

This cast metal bracket is designed to mount and support engine accessories. It features a triangular design with multiple mounting points for secure attachment.

Product Overview

Engine Accessory Mounting Bracket

This engine accessory mounting bracket is designed to provide secure support for critical engine components. Featuring a robust triangular geometry with precise mounting points at each vertex, it ensures stability and optimal alignment within the engine bay. Constructed from a durable metal alloy with a protective finish, this component is built to withstand the demanding thermal and mechanical stresses of automotive operation.

Technical Specifications

Part Number	SL74-7E234-AA
Material	Cast metal alloy
Design Geometry	Triangular
Mounting Points	3 points

Features

Surface Finish

Protective Coating • Corrosion Resistant

Application Compatibility

- Engine accessory support
- Automotive mounting system
