Overview

Precision-Engineered Connecting Rod

This high-quality engine connecting rod is engineered for durability and reliability in demanding automotive applications. Designed for compatibility with Toyota Hiace, Pickup, and Forklift 4Y engines, it ensures a perfect fit and consistent performance. Built from high-strength steel alloy, this component is precision-machined to meet OEM quality standards, providing an excellent alternative for engine maintenance and repair.

Compatibility

Compatible Engines	4Y Engine
Compatible Vehicles	Toyota Hiace, Pick Up, Forklift

Technical Specifications

Design Features

- Small end bushing for smooth piston pin movement
- Large end with bolted cap for secure crankshaft connection
- Precision machined for optimal performance

Material	High-strength steel alloy
