Product Overview

Engine Crankshaft Performance

This heavy-duty engine crankshaft is engineered to convert connecting rod force into torque, driving essential engine accessories with precision. Constructed from high-grade cast and forged steel, it ensures durability and reliability under demanding operating conditions. The component features a hardened surface finish exceeding HRC-60, providing exceptional wear resistance and extended service life.

Technical Specifications

Manufacturing Process	Cast Steel, Forged Steel
Hardness	60 HRC
Net Weight	98 Kg

Compatibility & Identification

Compatible Part Numbers

- 612600020373
- 61500020071

Engine Series Reference

WP10 • SHAA XI
