

Engine Cylinder Head Assembly

This engine cylinder head assembly houses the valves, spark plugs, and combustion chamber. It is designed to withstand high temperatures and pressures within internal combustion engines.

Overview

Engine Cylinder Head Assembly

This high-performance engine cylinder head assembly is precision-engineered to house critical valve train components, including rocker arms and valve adjusters. Designed for internal combustion engines, it ensures optimal combustion, heat dissipation, and reliable performance under high temperatures and pressures. The assembly features machined combustion chambers and ports for improved airflow, making it a robust solution for automotive engine maintenance.

Technical Specifications

Net Weight	17.3 Kg
Material	Steel
Part Numbers	643000, 40040R, 61500040040A, 685000

Features

Included Components

- Valves
- Rocker arms
- Valve adjusters
- Valve springs
- Machined combustion chambers
- Valve seats

Performance Benefits

High heat resistance • Improved airflow • Precision machined • Direct fitment
