

Engine Cylinder Head Gasket with Red Sealant

Composite gasket designed to seal the cylinder head to the engine block. Features a red sealant around openings to prevent leaks of fluids or gases.

Product Overview

Engine Cylinder Head Gasket

This high-performance cylinder head gasket is engineered to provide a reliable, leak-proof seal between critical engine components. Constructed from a durable composite material with a specialized grey speckled finish, it features integrated red sealant around key openings to ensure optimal fluid and gas containment. Designed for demanding mechanical environments, this gasket includes reinforced metal rings and precision-cut fastener holes to maintain structural integrity under operational pressure.

Technical Specifications

Design Features

- Integrated red sealant for enhanced leak prevention
- Reinforced metal ring for primary cylinder opening
- Rectangular port with black rubber seal
- Precision-drilled bolt holes for standard fasteners

Primary Application

Engine Assembly • Mechanical Sealing

Material Composition

Composite material with grey speckled surface

Sealing Technology

Red Sealant, Rubber Seal, Metal Ring Reinforcement
