

Engine Cylinder Head

This cylinder head is a crucial component of an internal combustion engine. It houses valves and forms part of the combustion chamber, sealing the cylinders and directing air and fuel mixture.

Overview

Engine Cylinder Head

This high-quality engine cylinder head is a critical component designed for internal combustion engines. It plays a vital role in sealing the combustion chamber and housing essential valve train components, including valves, springs, and rocker arms. Engineered for durability and precise operation, it ensures efficient intake and exhaust processes to maintain optimal engine performance.

Technical Details

Valve Springs Visible	4
Part Identifier	14033

Application

Engine Compatibility	Heavy Duty Engine, Internal Combustion
----------------------	--
