

Engine for Construction Machinery

This high-performance engine is designed for heavy-duty construction machinery applications, including loaders, excavators, and bulldozers. It features a robust design with dual turbochargers for enhanced power and efficiency.

Overview

High-Performance Construction Engine

This high-performance engine is specifically engineered for demanding heavy-duty construction machinery applications. Featuring a robust design with dual turbochargers, it delivers the necessary power and efficiency for loaders, excavators, and bulldozers. Built for reliability in challenging operating conditions, this unit ensures consistent torque and high power output for your equipment fleet.

Technical Specifications

Key Features

- Dual turbocharger system
- Heavy-duty construction design
- High torque output
- Optimized for demanding environments

Compatible Machinery

Loaders, Excavators, Bulldozers
