

Engine Intake Manifold

High-performance intake manifold designed to optimize airflow and improve engine efficiency. Constructed from durable, heat-resistant polymer material.

Product Overview

High-Performance Engine Intake Manifold

This high-performance intake manifold is engineered to significantly optimize airflow and enhance overall engine efficiency. Constructed from a durable, heat-resistant polymer material, it features an optimized runner design that ensures superior cylinder filling. With smooth internal surfaces designed to minimize flow restriction, this component delivers improved throttle response and measurable increases in both horsepower and torque.

Technical Specifications

Design Features

- Optimized runner design
- Smooth internal surfaces
- Precise fitment

Material

Heat-resistant polymer
