

Engine Piston for Internal Combustion Engines

This engine piston is designed for internal combustion engines. It is constructed from durable materials to withstand high temperatures and pressures.

Product Overview

High-Performance Engine Piston

This precision-engineered piston is designed for Komatsu KM-3 internal combustion engines, providing reliable performance and durability. Constructed from high-quality cast iron and steel, it features advanced surface treatments including phosphating and nitriding to ensure wear resistance and optimal sealing. Designed for stability and efficient heat dissipation, this component is an essential replacement part for maintaining engine power and longevity.

Technical Specifications

Part Number	6162-35-2120
Materials	Cast iron, Steel
Surface Treatment	Phosphating, Platform, Vulcanization, Nitriding
Hardness	HB210-280

Performance Features

Key Features

- Good sealing
- Good cooling effect
- Wear-resistant
- Steady performance

Logistics

Monthly Supply Ability

5000 pieces
