

Enterprise Converged Communications Platform

This enterprise-class converged communications platform provides secure and efficient communication solutions. Its rich business functions and expansion capability meet the needs of most enterprise applications.

Overview

Enterprise-Class Converged Communications

The SS3000-E is a highly efficient, enterprise-grade converged communications platform designed to handle complex business operational requirements. It offers a robust suite of value-added features including conference calling, voice mail, and IVR editing, while providing powerful expansion capabilities for custom automated voice applications. Built with security in mind, the platform features advanced encryption mechanisms for both signaling and media to ensure call privacy.
