

Enterprise Data Management Solution

This data management solution offers advanced features for data protection, storage optimization, and efficient data lifecycle management. It provides a scalable and reliable platform for managing large data volumes, ensuring data availability and business continuity.

Product Overview

Enterprise-Grade Data Management

The SVL2000 is a high-performance data management solution engineered for demanding enterprise environments. It provides a scalable and reliable platform for managing large volumes of data while ensuring high availability and business continuity. This system integrates seamlessly with existing IT infrastructure and supports various storage protocols to optimize data lifecycles.

Performance & Optimization

Optimization Capabilities

- Storage optimization for reduced footprint
- Advanced data protection mechanisms
- Efficient data lifecycle management
- Seamless IT infrastructure integration

Core Features

Data Deduplication, Compression, Replication, Automated Tiering

Technical Specifications

Storage Protocols

Multi-Protocol Support

Model Number

SVL2000

Operational Benefits

Business Continuity

Yes

Scalability

Scalable platform for large data volumes
