

# Enterprise Data Management System

The UIT BX1600 is a high-capacity data management system designed for demanding enterprise environments. It offers scalable storage solutions with support for multiple hard drives or solid-state drives.

## Overview

### High-Capacity Enterprise Storage

The BX1600 is a high-capacity data management system engineered for demanding enterprise environments. It offers scalable storage solutions with support for multiple hard drives or solid-state drives, ensuring long-term flexibility. With advanced data protection and redundant hardware components, it provides a reliable foundation for mission-critical data operations.

## Performance & Capacity

### Storage Scalability

HDD Support • SSD Support • Scalable Architecture

### Data Transfer

High-speed transfer rates with efficient resource utilization

## Reliability & Protection

### Data Protection

- Advanced RAID configurations
- Data integrity mechanisms
- High availability protocols

### Hardware Redundancy

Redundant Power Supplies, Redundant Cooling Systems

## Connectivity

### Connectivity Interfaces

Connection Type	Feature
Ethernet	Standard Network Integration
Fibre Channel	High-Performance Storage Networking

## Management

### System Management

- Intuitive configuration software
- Real-time performance analysis
- Advanced troubleshooting tools
