

Enterprise Network Switch

This high-performance network switch is designed for robust data transmission and network management. The device features multiple ports including Ethernet and fiber optic interfaces for versatile connectivity.

Overview

Enterprise-Grade Network Connectivity

This high-performance network communication device is engineered for robust data transmission and efficient network management. Featuring versatile connectivity options including both Ethernet and fiber optic interfaces, it provides the scalability required for modern enterprise infrastructure. With advanced capabilities such as secure data handling, traffic prioritization, and remote management, it serves as a dependable solution for businesses demanding reliable network performance.

Technical Specifications

Device Type	gEPON OLT
Connectivity Interfaces	Ethernet, Fiber Optic

Key Features

Advanced Features

- Secure data handling
- Traffic prioritization
- Remote management capabilities
- Robust data transmission

Performance Highlights

1 Enterprise

Reliability Level

2 Ports
