Product Overview

The EPAL Standard Pallet System

The EPAL-System provides a standardized, quality-assured open pallet exchange pool designed for global logistics. These pallets are inspected under strict quality procedures, ensuring consistent performance for material flow automation and international commodity transport. By utilizing these standardized load carriers, businesses can achieve safer transport, stable storage, and improved operational safety across their supply chain.

Quality & Compliance

Quality Control Features

- Regular independent quality inspections
- Quality control staple markings
- Certified repair marking nails for reconditioned units

Compliance Standards

EPAL, UIC, UIC CODE435-3

Operational Benefits

Operational Advantages

- Safer transport of goods
- Stable storage capabilities
- Optimum operational safety in the workplace
- Smooth material flow for international logistics

Design & Construction

A heavy-duty, reusable metal pallet designed for secure containment and storage efficiency.

Design Features

Collapsible • Stackable • Galvanized finish • Forklift accessible

Construction

Heavy-duty steel wire mesh with reinforced frame
