

EPC General Contracting Services for Power Plants

These services provide engineering, procurement, and construction management for power plant projects. They cater to fossil-fueled, wind power generation, and waste incineration power plants.

Service Overview

Comprehensive Power Plant EPC Services

This service provides full-lifecycle general contracting for power plant construction, including engineering, procurement, and construction management. Projects are executed with a focus on environmental friendliness, safety, and operational reliability. The service supports diverse energy solutions, including fossil-fueled, wind power, and waste incineration facilities.

Service Capabilities

Maximum Output per Project

600 MW

Max Power Capacity

Concurrent Project Capacity

5 projects

Service Scope

Project Lifecycle Coverage

- Engineering
- Procurement
- Construction Management
- Operating
- Commissioning
- After-sale Service

Supported Plant Types

Supported Plant Types

Fossil-fueled, Wind Power, Waste Incineration

Contract Models

Available Contract Models

BOT • EPC
