

Equatorial Telescope Mount

This equatorial mount is engineered for precision astronomical observation. It allows extended viewing of celestial objects with accurate tracking in right ascension and declination.

Product Overview

Precision Astronomical Tracking

The Em8 equatorial instrument is a precision-engineered mount designed for stable and accurate astronomical observation. By compensating for the Earth's rotation, it allows for extended, clear viewing of stars, planets, and other celestial objects. Its durable construction and fine adjustment controls make it an ideal choice for mounting small to medium-sized telescopes.

Technical Specifications

Navigation Features

- Graduated circles for celestial coordinate location

Tracking Axes	Right Ascension, Declination
Adjustment Type	Fine adjustment knobs

Design & Build

Mount Type

Equatorial

Construction	Durable materials
Compatibility	Small to medium-sized telescopes
