

Equipment Testing and Diagnostic Measurement Meter

This product serves as the foundation for constructing equipment testing, diagnostics, and maintenance hardware platforms. The product range basically covers commonly used test measurement instrument modules and has been widely applied in various equipment tests.

Overview

Professional Diagnostic Measurement Foundation

This modular measurement system serves as the foundational architecture for building comprehensive equipment testing, diagnostics, and maintenance hardware platforms. Designed to support independent equipment testing, the product range covers a versatile spectrum of modules including VXI/PXI bus instruments and mobile chassis systems. These components are engineered to provide reliable, high-performance measurement capabilities for critical maintenance and diagnostic applications.

Technical Specifications

Supported Instrument Types

- VXI/PXI bus modular instruments
- Handheld instruments
- Benchtop instruments
- VXI/PXI bus chassis
- Mobile shock-absorbing chassis

Application & Compliance

Market Status

Domestic Capability • Import Alternative

Application Scope

Equipment Testing, Diagnostics, Maintenance Hardware, System Integration
