

Ethernet Over Coax (EOC) Terminal

The EOC (Ethernet over Coax) terminal transmits Ethernet data over coaxial cables. It enables high-speed data communication where coaxial cabling is in place, removing the need to install new Ethernet cables.

Overview

High-Performance OFDM Access

The Ethernet Over Coax (EOC) terminal is designed to meet the high bandwidth requirements of modern users and enterprises. By leveraging existing coaxial cable infrastructure, this device provides a robust, high-performance OFDM access solution. It features three full-duplex Fast Ethernet interfaces, allowing for seamless connectivity for computers, IP telephones, and other network terminals.

Technical Specifications

Ethernet Interfaces	3 ports
Duplex Mode	Full-Duplex
Ethernet Standard	Fast Ethernet
Modulation	OFDM

Indicators

Status LEDs	PWR, LNK, LAN1, LAN2, EOC, TEL
