

Evacuated Blood Collection Tubes

These evacuated blood collection tubes are essential for collecting blood samples in medical and pharmaceutical settings. The tubes have various colored stoppers, indicating different additives for specific laboratory tests.

Product Overview

Evacuated Blood Collection Tubes

These evacuated blood collection tubes are essential components designed for professional laboratory and clinical use. Each tube is engineered to facilitate precise blood sample collection and analysis, ensuring sample integrity for diagnostic procedures. The system features color-coded stoppers to clearly identify specific additives, streamlining workflow in medical and pharmaceutical settings.

Technical Specifications

Available Additive Types

- PT-Na
- K2-EDTA
- HEPARIN
- S-CLOT

Common Applications

Diagnostic Procedures, Laboratory Analysis, Blood Sample Collection, Medical Testing
