

Evacuated Tube Solar Water Heater

This evacuated tube solar water heater is designed for residential or commercial use. It features a high-efficiency solar collector with multiple vacuum tubes for maximum heat absorption, and its insulated storage tank minimizes heat loss.

Overview

High-Efficiency Solar Heating

This evacuated tube solar water heater is designed for both residential and commercial applications, offering a sustainable solution for hot water needs. Featuring high-efficiency vacuum tubes, it maximizes solar heat absorption even in suboptimal weather conditions. The integrated insulated storage tank is engineered to minimize heat loss, ensuring consistent thermal performance and energy savings.

Key Features

Key Characteristics

High-Efficiency Collector, Corrosion-Resistant, Thermal Insulation, Residential & Commercial Use, Cost-Effective

Performance

Performance Metrics

100 %

Heat Absorption Efficiency

Technical Details

Core Components

- Evacuated vacuum tubes
- Insulated storage tank
- Corrosion-resistant framework
