

Evacuated Tube Solar Water Heater

This evacuated tube solar water heater can be operated automatically when connected to an intelligent controller. Its simple structure allows for easy plug-in installation on both flat and inclined roofs.

Overview

High-Efficiency Solar Heating

This evacuated tube solar water heater offers a sustainable and cost-effective solution for both residential and commercial hot water needs. Its advanced tube technology maximizes solar energy capture even in low-light conditions, while the robust, weather-resistant construction ensures consistent performance. Designed for easy installation on both flat and inclined roofs, it provides a reliable, automatic hot water supply.

Technical Specifications

| | |
|----------------------|---------------------------|
| Inner Tank Material | SUS304-2B stainless steel |
| Insulation Thickness | 65 mm |
| Insulation Material | Polyurethane foam |

Features

Operational Capabilities

- Automatic operation with intelligent controller
- Simple plug-in installation
- Compatible with auxiliary electric booster
- High wind resistance
- Corrosion-resistant sealing

| | |
|----------------------------|-------------------------------------------------------------|
| Installation Compatibility | Flat Roof, Inclined Roof, Camping Areas, Holiday Residences |
|----------------------------|-------------------------------------------------------------|
