

Evacuated Tube Solar Water Heater

This evacuated tube solar water heater system is engineered for reliable hot water production. Its high-capacity insulated tank maintains heat, while multiple evacuated tubes maximize solar energy absorption.

Product Overview

Evacuated Tube Solar Water Heater

This evacuated tube solar water heater system is engineered for efficient and reliable hot water production. It features a high-capacity insulated tank designed for superior heat retention, ensuring hot water availability even when solar input fluctuates. With multiple evacuated tubes for maximum solar energy absorption, this system is an ideal solution for both residential and commercial applications seeking sustainable and cost-effective water heating.

Technical Specifications

Model Number	HM002
System Type	Evacuated Tube Solar Water Heater

Features

Key Features

- High-capacity insulated tank
- Advanced heat retention
- Maximum solar energy absorption
- Suitable for residential and commercial use
