

Evacuated Tube Solar Water Heater

This high-efficiency solar water heater uses evacuated tube collectors. It is designed for residential and commercial use, providing a sustainable hot water solution.

Product Overview

High-Efficiency Solar Heating

This evacuated tube solar water heater is engineered for optimal heat absorption in both residential and commercial environments. The system features a durable cylindrical insulated storage tank paired with a robust support frame to ensure long-term reliability. By leveraging advanced solar thermal technology, it provides a sustainable and cost-effective solution for hot water needs.

Technical Specifications

Key Components

- Evacuated tube collectors
- Insulated storage tank
- Support frame

Collector Technology	Evacuated Tube
Application Suitability	Residential, Commercial

Design Features

Design Highlights

High-Efficiency Absorption • Thermal Insulation • Durable Frame Construction
